New Product Information VE-03 Air to Electronic Converter

Product Highlights:

- Very compact size: only 3.5" (89mm) high, 5.5" (140mm) long, and 1.25" (32mm) wide.
- Anodized aluminum case.
- Completely sealed unit protects against contamination from coolant, dust, etc.
- Mounts to a standard DIN rail.
- A single set screw locks or releases the unit for easy installation or removal even in between other units.
- The gage connection can come out the front or rear depending on the application.
- Front panel mounted Zero and Gain controls adjust signal being sent to display device.

VGAGE is proud to introduce the new VE-03 Air to Electronic Converter. When gaging requirements dictate the use of a non-contact air probe, the results may be displayed on an electronic column or gage amplifier through the use of the VE-03 Air to Electronic Converter. The VE-03 is very compact and designed to mount as a free-standing unit to a standard DIN rail. The unit is completely sealed making it impervious to coolant, dust and any other impurities which may otherwise compromise the gaging function. VGAGE offers the VE-03 as part of our complete line of products designed to provide gaging solutions for close-tolerance, high-production inspection.
